COURSE DESCRIPTION

C++ is an associated degree object-oriented artificial language that's straightforward and fashionable and a general artificial language for application development.

COURSE OBJECTIVES

1. To engender an appreciation for the need and characteristics of Object-orientation.
2. To impart knowledge of the C++ language grammar in order to design and implement programming solutions to simple problems by applying Object-oriented thinking.

UNITS:

Unit: I Object Oriented Programming Concepts (12 Hrs)

Object Oriented Programming Concepts: Complexity in software - The need for object-orientation – Abstraction – Encapsulation – Modularity – Hierarchy.

Basic Elements of C++: **Classes – Objects – Data members and member functions** – private and public access specifiers - Static members - Constructors – Singleton class - Destructors

Unit : II Friend Functions and Friend Classes (12 Hrs)

Friend Functions and Friend Classes - Array of objects – Pointer to objects - this pointer – References – Dynamic memory allocation - Namespaces.

Function Overloading: Overloading a function - Default arguments – Overloading Constructors.

Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function

Unit : III Overloading (12 Hrs)

Overloading the operators [], (), -> and comma operators – Conversion Functions. Inheritance: Types of inheritance – protected access specifier – Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions

Unit : IV Function overriding (12 Hrs)

Function overriding - Pure virtual function – Abstract base class. Templates: Function templates – Overloading a function template – Class templates.

Unit: V Exception Handling (12 Hrs)

Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort(), unexpected(), set_terminate().

I/O Streams: Formatted I/O with ios class functions - Manipulators – Creating own manipulator – Overloading << and >> operators.

UNIT – VI DYNAMISM (Evaluation Pattern-CIA only)

File Pointers - Updating a File - Error Handling during File Operations - Command-line Argument
