

**DEPARTMENT OF INFORMATION TECHNOLOGY
& MANAGEMENT**

A ONE DAY NATIONAL CONFERENCE

ROBOTICS & AUTOMATION

**Chief Editor
Dr. S. Arun Prasad**

**ARUL ANANDAR COLLEGE
(AUTONOMOUS)**

(Reaccredited by NAAC at 'A' Grade
Affiliated to Madurai Kamaraj University
(DST - FIST Sponsored College)
Karumathur - 625 514, Madurai, Tamil Nadu

Proceedings of the National Conference on Robotics and Automation

23rd February 2024

Chief Editor

Dr. S. Arun Prasad

Editorial Members

Dr. R. Kadher Farook

Dr. P. Ramachandran

Mr. J. Albert Irudayaraj

Dr. R. A. Vinoth Kumar

Organized by

Department of Information Technology and Management

Arul Anandar College(Autonomous),

Reaccredited by NAAC at 'A' Grade

Affiliated to Madurai Kamaraj University

(DST-FIST Sponsored College)

Karumathur-625514

Madurai District, Tamil Nadu.

**Proceedings of the National Conference on Robotics and Automation held on
February 23, 2024.**

Organized by

Department of Information Technology and Management, Arul Anandar
College, Karumathur, Madurai.

Investigation on The Prospects of Forthcoming Multi-Modal Biometrics Fusion

Ms.P. Renganayagi

Assistant Professor, Department of Computer Applications, Fatima College, Madurai

B.Amala Renitha (2021BC03)

P.Nagameenalokchini (2021BC24)

III year UG, Department of Computer Applications, Fatima College, Madurai

ABSTRACT:

A biometric classification is basically a prototype detection system that is activated by gaining biometric evidences from a personality, then the feature set from the attained data, and match up the facet set aligned with the pattern set in the database. This technology is also the science of distinguishing and recognising the human qualities using equipments that channels and analyses the biological statistics. Multimodal biometric structures are becoming more and more popular, they have more accurateness as compared to unimodal biometric systems. These systems are more complex to build but these systems are the future traits. Current obsolete methods such as private-public keys, passwords and PIN's generated are with no trouble stolen and pooled. This paper focuses the expertises that are used as modes of categorizing an individual based on their distinctive physiological and behavioural qualities to secure our information now and also in the future. Deployed multimodal biometric systems also referred to as multi-biometrics or even as multimodalities are commonly found and used in electronic chips, embedded in travel documents. A noteworthy amount of very topical advances to the appropriate fortification expertise have been available. This paper demonstrates an inclusive indication of study in multi-biometrics, the security of their stencils and the solitude concern that come to pass. State-of-the-art re-examination of the breathing fictionedifying the in-progress proposals are also supplied based on the altered levels of fusion and the employed protection algorithms.

Key Words: Biometric Evidences, Uni-Modal, Multi-Modal Structure, Privacy Issues.
