PROGRAMME CODE: UAPH

FATIMA COLLEGE (AUTONOMOUS), MADURAI – 625018

NAME OF THE PROGRAMME: B.SC. PHYSICS

PROGRAMME OUTCOMES:

The learners will be able to

- PO1: Apply acquired scientific knowledge to solve complex issues.
- **PO2:** Attain Analytical skills to solve complex cultural, societal and environmental issues.
- **PO3:** Employ latest and updated tools and technologies to analyse complex issues.

PO4: Demonstrate Professional Ethics that foster Community, Nation and Environment Building Initiatives.

Programme Specific Outcomes:

Students will

- **PSO1:** Acquire thorough knowledge of the basic concepts of the frontier areas of Physics comprising Mechanics, Properties of matter, Electromagnetism, Electronics, Thermodynamics, Modern Physics, optics, Medical Physics and Opto electronics.
- **PSO2:** Understand and solve the physics problems in everyday life using the acquired basic knowledge.
- **PSO3:** develop skills to perform experiments based on the theoretical understanding
- **PSO4:** Apply the knowledge acquired to analyse and design models in the versatile realm of physics.
- **PSO5:** Equip with the essential foundations for higher education and research in physics.

terion : I - Curricular Aspects
 tric : 1.1.1 - Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and Course Outcomes (COs) - B.Sc. PHYSICS
 tr : 2015 - 2020

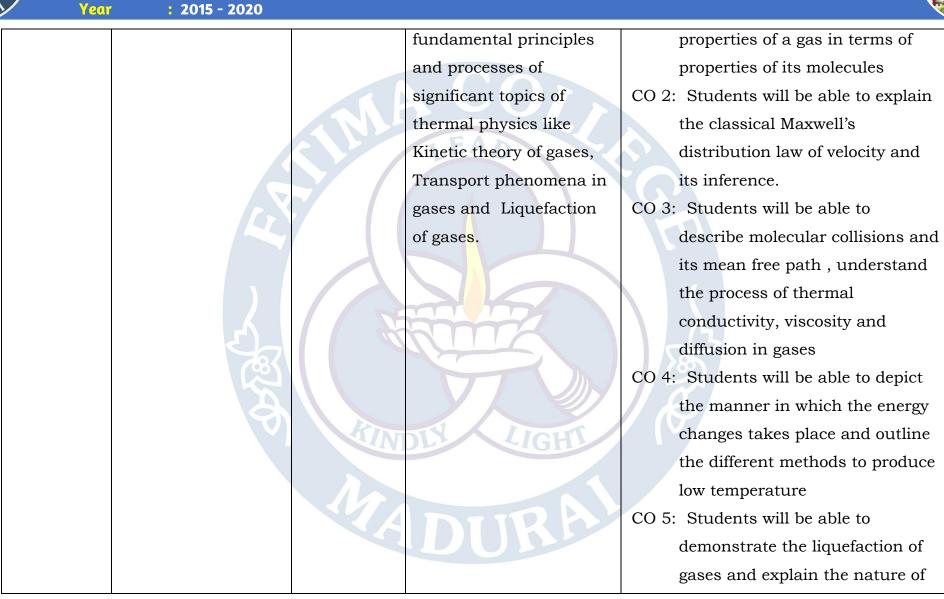

2019 - 2020

Course Code	Course Title	NATURE OF THE COURSE (LOCAL/ NATIONAL/ REGIONAL/ GLOBAL)	COURSE DESCRIPTION	Course Outcomes
19P1CC1	Mechanics and	National	The objective of this	CO 1: To understand in depth the
	Properties of Matter		course is to understand	gravitational force, field,
			the bas <mark>ic</mark> properties of	potential and energy.
			matter and mechanics of	CO 2: To study the acceleration due to
	<u></u>		fluids	gravity at various positions
	(8)			CO 3:To gain knowledge about the
	5			properties of matter and
	9	A Star		compute the same
		IN	DL1 LIGHT	CO 4:To discuss the mechanics of fluid motion and its applications
19P1CC2	Thermal Physics	National	The course provides a	CO 1: Students will be able to analyse
			conceptually based	a microscopic approach and seek
			exposure to the	to account for the macroscopic

Year

Criterion : I – Curricular Aspects

: 2015 - 2020

				gases in the neighbourhood of absolute zero temperature.
19M3ACP1	Allied Physics - I	National	The course provides a	CO 1: Define and discuss about the
/19C1ACP1			conceptually based	simple harmonic waves and its
/19G3ACP1			exposure to the	oscillations and laws of
			fundamental principal	transverse vibrations of strings.
	2		and processes of	CO 2: Classify and describe the
			significant topics of	properties of matter such as
			physic <mark>s li</mark> ke Waves and	electricity, viscosity and surface
			Oscillations, Properties of	tension.
	5		matter, Electricity and	CO 3: Summarise the basic concepts
	681		Magnetism and	of thermal physics and apply the
			Geometrical Optics.	laws of thermodynamics in
	8	Kro	NU LIGHT	higher learning concepts such as
		IN	DL' LIGHT	entropy and its reversible and
				irreversible process.
				CO 4: Explain the principles and laws
				used in electricity and
				magnetism those are useful in

	NAAC – 4 th CYCLE – Self Study Report (SSR)
Criterion : I – Curricular Aspects	Fatina College
	es (POs), Programme Specific Outcomes (PSOs) and
Course Outcomes (COs) – B.S.	c. PHYSICS
MADURAL Year : 2015 - 2020	
	defining the energy of a capacitor
	and magnetic effect of electric
	current.
	CO 5: Demonstrate the properties of
	geometrical optics and explain
	the refraction and dispersion
	through a prism.
19P1NME/ Physics in everyday National	Aim of this course is to CO 1: Discuss and illustrate the
19P2NME Life	enable the student to importance of paying attention to
	understand the physics the basic units of physical
	concepts in day today quantities and the standards
	life. accepted for their measurement,
	describe the motion in terms of
	particle's position, velocity and
	acceleration and analyse the
	cause of motion
	CO 2: Understand the concepts of
	heat, waves, sound, electricity,
	magnetism and explore their

Year

Criterion : I – Curricular Aspects

: 2015 - 2020

			nature.
Digital Principles and Applications	National	Aim of this course is to enable the students to understand digital principles and applications	 nature. On completion of the course, students will be able to CO 1: Define the different types of number systems and explain the basic and universal logic circuits CO 2: Simplify the logic expressions using Boolean laws and Kmap CO 3: describe the principles behind the data processing and arithmetic circuits CO 4: explain the working of basic flipflops and design master slave flipflops CO 5: Understand the working of shift

Year

Criterion : I – Curricular Aspects

: 2015 - 2020

					techniques
19P2CC4	Oscillations and	National	To understand waves,	CO 1:	To understand simple harmonic
	Waves		oscillations and its		motion
			applications in human	CO 2:	To understand Principle of
			ear, musical		Superposition and apply to
			instruments. To know	\G ²	derive mathematical
			about Doppler effect,		representation of stationary
			Ultrasonic and various		waves, interference waves and
			applica <mark>tio</mark> ns of them		beats. Determine the conditions
					for the same.
	5	<i>v</i>		CO 3:	To understand the Doppler
	68				effect in acoustics and apply
	2				the same and solve problems
	8	1 Kin	N LINE	CO 4:	To distinguish the different
		IN	DL1 LIGHT		range of acoustic waves.
				CO 5:	To study the ultrasonic waves
					generation and application of
		Y Y	DUSP		the same

Year

Criterion : I – Curricular Aspects

: 2015 - 2020

1	9P2CC5	Applied Mechanics	National	The course enables the	CO 1: Students will be able to
				students to understand	demonstrate an understanding
				the fundamental and	of central forces and explain
				advanced concepts of	Kepler's laws of Planetary motion
				Central force, Projectile	CO 2: Students will be able to
				motion, interrelationship	compute the path of projectile
				between energy and	launched with horizontal and
				work, l <mark>in</mark> ear momentum	vertical velocity components in
				and an <mark>gu</mark> lar momentum	the Earth's gravity
					CO 3: Students will be able to
		2			evaluate the interrelationship
		681			between energy and work
					CO 4: Students will be able to
			IN	DL1 LIGHI	describe the motion of the center
					of mass of an object, state the
					conservation principles involving
				DTTR 3	momentum and explore its
			Y		applications, analyse collisions

	Metric Year	: 1.1.1 – Program Course Outcomes : 2015 - 2020		Ds), Programme Specific Outcor YSICS	nes (PSOs) and
19M4A	CP3/ Allie	ed Physics- II	National	The course provides a	between two objects CO 5: Students will be able to apply law of conservation angular momentum appropriately in rigid body rotations, relate the rotational and translational parameters based on rotational kinematics. CO 1: Students will be able to
19C2A 19G4A	CP3/			conceptually based exposure to the fundamental principal and processes of significant topics of physics like geometrical Optics, Atomic Physics, Nuclear Physics and Electronics.	 color 1. Structures will be able to categorize and clarify the different optical phenomena of interference, diffraction, polarization. CO 2: Students will be able to explain the atom model and calculate the total energy of an atom and account for the spectral series of hydrogen atom.

THINA C

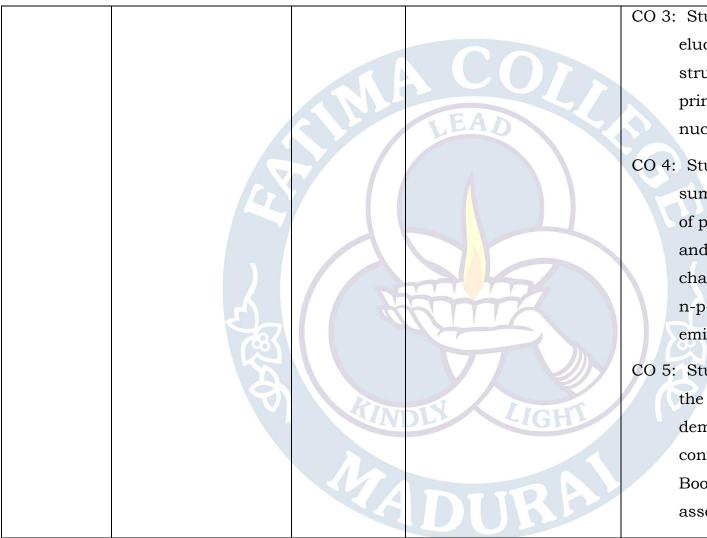

Year

Criterion : I – Curricular Aspects

: 2015 - 2020

Metric : 1.1.1 – Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and Course Outcomes (COs) – B.Sc. PHYSICS

CO 3: Students will be able to elucidate the models of nuclear structure and to learn the principle behind atom bomb, nuclear reactors.

- CO 4: Students will be able to summarize the working principle of p-n junction diode in forward and reverse biasing, its V-I characteristics, the Zener Diode, n-p-n transistor in common emitter characteristics.
- CO 5: Students will be able to classify the number system and demonstrate the skill in conversion of Number systems, Boolean algebra and its associated laws.

COURSE CODE	COURSE TITLE	NATURE OF THE COURSE (LOCAL/NATIONAL/ REGIONAL/GLOBAL)	COURSE OBJECTIVE
P3CC6	Electromagnetism	National	• This course imparts a sound knowledge in electromagnetism.
M3ACP1/ G3ACP1	Allied Physics I	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like Waves and Oscillations, Properties of matter, Electricity and Magnetism and Geometrical Optics
P3SB1	Biomechanics	National	• This course aims to introduce the Biomechanical concepts and to give an idea about the anatomic pulleys and lever systems
P4CC7	Electronics	National	• The aim of this course is to provide a basic

P4CC8	Major Practicals-II	National	 knowledge in semiconductor, transistor, amplifier, oscillator and digital electronics This laboratory course explores the basic principles of electricity and magnetism, basic elements of electric circuits through experiments
M4ACP2/ G4ACP2	Allied Physics II	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like geometrical Optics, Atomic Physics, Nuclear Physics and Electronics
M4ACP3/ G4ACP3	Allied Practicals	National	• This course enables the student to develop broad array of basic skills and tools of experimental physics
P4SB2	Physics of Stars	National	• This course briefly explains the life cycle of a star. It throws light on various nuclear reactions taking place in a star. It explains

			about the mysterious objects of the universe. It creates passion for Astronomy among the students
P5CC9	Electronics and Communication	National	• This course aims at the fundamentals of digital electronics, flip-flops, registers, counters and D/A & A/D converters. It also exposes the students to modulation, satellite communication and fibre optics communication
P5CC10	Optics	National	• This course aims at giving a detailed study of interference, diffraction, polarization, Holography, Laser and Maser
P5SB3	Physics of Measuring Instruments-1	National	• This course enable the students to learn the principles behind thermo dynamical measurements and mechanical and electrical measurements.
P5SB4	Physics of Medical	National	• To enable the student learn the physics

	Instruments-I	A CO	principles behind the medical instruments used for diagnosis especially pressure, sound, light and electricity
P6CC11	Thermodynamics and Statistical Mechanics	National	• The aim of this course is to deal with thermodynamics, entropy and thermodynamic potentials. This course also deals with statistical thermodynamics and applications of statistics to gases.
P6CC12	Modern Physics	National	• This course deals with the wave properties of particles and fundamentals of Quantum Mechanics. Nuclear models and special relativity are dealt with in detail.
P6CC13	Major Practicals-III	National	• This laboratory course explores the basic principles of electronics through experiments
P6CC14	Major Practicals-IV	National	• This laboratory course explores the basic principles of non-electronics through experiments

P6ME1/2	Microprocessor/Medical	National	• Microprocessor: This course explores the
	Physics	A CO LEAD	 assembly language program codes and simple microprocessor programs Medical Physics: This course deals with the applications of electricity and magnetism in medicine, light in medicine, nuclear medicine, radiation protection in medicine and computers in medicine
P6ME2/3	Opto Electronics/Energy Physics	National	 Optoelectronics: Optoelectronics is a recent field. This course aims at giving an idea about fibre optics systems and communication. This course also deals with the LEDs and stimulated emission in intrinsic semiconductors, photo detectors and modulation methods. Energy Physics: This course covers the different sources of renewable energy sector and its applications.

P6SB5	Physics of Measuring Instruments - II	National	• This course enable the students to learn the physics principles behind astronomical measurements, electron microscopes and X-ray diffraction measurements
P6SB6	Physics of Medical Instruments-II	National	• This course enables the students to learn the working principles of medical instruments used in radiography and nuclear medicine.
2018 - 2019	Sal		
COURSE CODE	Course Title	NATURE OF THE COURSE	COURSE OBJECTIVE

		COURSE (LOCAL/NATIONAL/ REGIONAL/GLOBAL)	
P1CC1	Mechanics and Properties of Matter	National	• The objective of this course is to understand the basic properties of matter and mechanics of fluids

			gases, Maxwellian Distribution of speeds in an
		AUU	Ideal gas, transport phenomena and
		LEAD	production of very low temperatures.
C1ACP1	Allied Physics-I	National	• This course provides a conceptually based
			exposure to the fundamental principal and
			processes of significant topics of physics like
			Waves and Oscillations, Properties of matter,
			Electricity and Magnetism and Geometrical
			Optics.
P1NME1	Physics in Everyday Life	National	• Aim of this course is to enable the student to
			understand the physics concepts in day today
		VDLY LIG	life.
B1ACP1	Digital Principles and	National	• Aim of this course is to enable the students to
	Applications		understand digital principles and applications
P2CC3	Oscillations, Waves and	National	• This course enables to understand waves,
	Fluid Dynamics		oscillations and its applications in human ear,

		ACC	musical instruments and to know about Doppler effect, Ultrasonic and various applications of them.
P2CC4	Advanced Mechanics	National	• This course deals with understanding of central force, Projectile motion, work and kinetic energy linear momentum, collision and angular momentum.
P2CC5	Major Practicals-I	National	• The course provides hands on training to determine the properties of materials relevant to the theory learnt in core courses.
C2ACP2	Allied Physics II	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like geometrical Optics, Atomic Physics, Nuclear Physics and Electronics.
C2ACP3	Allied Practicals	National	• This course enables the student to develop broad array of basic skills and tools of

Year

: 2015 - 2020

			experimental physics.
P2NME2	Physics in Everyday Life	National	• Aim of this course is to enable the student to understand the physics concepts in day today life.
P3CC6	Electromagnetism	National	• This course imparts a sound knowledge in electromagnetism.
M3ACP1/ G3ACP1	Allied Physics I	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like Waves and Oscillations, Properties of matter, Electricity and Magnetism and Geometrical Optics

P4CC7	Electronics	National	• The aim of this course is to provide a basic

Year

: 2015 - 2020

			knowledge in semiconductor, transistor, amplifier, oscillator and digital electronics
P4CC8	Major Practicals-II	National	• This laboratory course explores the basic principles of electricity and magnetism, basic elements of electric circuits through experiments
M4ACP2/ G4ACP2	Allied Physics II	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like geometrical Optics, Atomic Physics, Nuclear Physics and Electronics
M4ACP3/ G4ACP3	Allied Practicals	National	• This course enables the student to develop broad array of basic skills and tools of experimental physics
P4SB2	Physics of Stars	National	• This course briefly explains the life cycle of a star. It throws light on various nuclear reactions taking place in a star. It explains

		AC	about the mysterious objects of the universe. It creates passion for Astronomy among the students
P5CC9	Electronics and Communication	National	• This course aims at the fundamentals of digital electronics, flip-flops, registers, counters and D/A & A/D converters. It also exposes the students to modulation, satellite communication and fibre optics communication
P5CC10	Optics	National	• This course aims at giving a detailed study of interference, diffraction, polarization, Holography, Laser and Maser
P5SB3	Physics of Measuring Instruments-1	National	• This course enables the students to learn the principles behind thermo dynamical measurements and mechanical and electrical measurements.
P5SB4	Physics of Medical	National	• To enable the student learn the physics

	Instruments-I	AC	principles behind the medical instruments used for diagnosis especially pressure, sound, light and electricity
P6CC11	Thermodynamics and Statistical Mechanics	National	• The aim of this course is to deal with thermodynamics, entropy and thermodynamic potentials. This course also deals with statistical thermodynamics and applications of statistics to gases.
P6CC12	Modern Physics	National	• This course deals with the wave properties of particles and fundamentals of Quantum Mechanics. Nuclear models and special relativity are dealt with in detail.
P6CC13	Major Practicals-III	National	• This laboratory course explores the basic principles of electronics through experiments
P6CC14	Major Practicals-IV	National	• This laboratory course explores the basic principles of non-electronics through experiments

P6ME1/2	Microprocessor/Medical	National	• Microprocessor: This course explores the
	Physics		assembly language program codes and simple
		AUU	microprocessor programs
		FAD	• Medical Physics: This course deals with the
		LEND	applications of electricity and magnetism in
			medicine, light in medicine, nuclear
			medicine, radiation protection in medicine
			and computers in medicine
P6ME2/3	Opto Electronics/Energy	National	• Optoelectronics: Optoelectronics is a recent
	Physics		field. This course aims at giving an idea
	5		about fibre optics systems and
			communication. This course also deals with
	a la		the LEDs and stimulated emission in intrinsic
		NDLY LIG	semiconductors, photo detectors and
			modulation methods.
			• Energy Physics: This course covers the
		ADIR	different sources of renewable energy sector
			and its applications.

P6SB5	Physics of Measuring	National	• This course enable the students to learn the
	Instruments - II	ACO	physics principles behind astronomical measurements, electron microscopes and X- ray diffraction measurements
P6SB6	Physics of Medical Instruments-II	National	• This course enables the students to learn the working principles of medical instruments used in radiography and nuclear medicine.

P3SB1	Biomechanics	National	• This course aims to introduce the Biomechanical concepts and to give an idea about the anatomic pulleys and lever systems

Criterion: I - Curricular AspectsMetric: 1.1.1 - Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and
Course Outcomes (COs) - B.Sc. PHYSICSYear: 2015 - 2020

P4CC7	Electronics	National	• The aim of this course is to provide a basic knowledge in semiconductor, transistor, amplifier, oscillator and digital electronics
P4CC8	Major practical-II	National	• This laboratory course explores the basic principles of electricity and magnetism, basic elements of electric circuits through experiments
M4ACP2/ G4ACP2	Allied physics II	National	• The course provides a conceptually based exposure to the fundamental principal and processes of significant topics of physics like geometrical Optics, Atomic Physics, Nuclear Physics and Electronics
M4ACP3/ G4ACP3	Allied Practicals	National	• This course enables the student to develop broad array of basic skills and tools of experimental physics
P4SB2	Physics of stars	National	• This course briefly explains the life cycle of a star. It throws light on various nuclear

P5SB4	Physics of medical instruments- I	National	• To enable the student learn the physics principles behind the medical instruments used for diagnosis especially pressure, sound, light and electricity
P6CC11	Thermodynamics and statistical mechanics	National	• The aim of this course is to deal with thermodynamics, entropy and thermodynamic potentials. This course also deals with statistical thermodynamics and applications of statistics to gases.
P6CC12	Modern physics	National	• This course deals with the wave properties of particles and fundamentals of Quantum Mechanics. Nuclear models and special relativity are dealt with in detail.
P6CC13	Major practical-III	National	• This laboratory course explores the basic principles of electronics through experiments
P6CC14	Major Practicals-IV	National	This laboratory course explores the basic principles of non-electronics through

Year

: 2015 - 2020

Criterion: I - Curricular AspectsMetric: 1.1.1 - Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and
Course Outcomes (COs) - B.Sc. PHYSICS

			experiments
P6ME1/2	Microprocessor/medical physics	National	 Microprocessor: This course explores the assembly language program codes and simple microprocessor programs Medical Physics: This course deals with the applications of electricity and magnetism in medicine, light in medicine, nuclear medicine, radiation protection in medicine and computers in medicine
P6ME2/3	Opto electronics/energy physics	National	 Optoelectronics: Optoelectronics is a recent field. This course aims at giving an idea about fibre optics systems and communication. This course also deals with the LEDs and stimulated emission in intrinsic semiconductors, photo detectors and modulation methods. Energy Physics: This course covers the different sources of renewable energy sector

Criterion: I - Curricular AspectsMetric: 1.1.1 - Programme Outcomes (POs), Programme Specific Outcomes (PSOs) and
Course Outcomes (COs) - B.Sc. PHYSICSYear: 2015 - 2020

			and its applications.
P6SB5	Physics of measuring instruments - II	National	• This course enable the students to learn the physics principles behind astronomical measurements, electron microscopes and X-ray diffraction measurements
P6SB6	Physics of medical instruments-II	National	• This course enables the students to learn the working principles of medical instruments used in radiography and nuclear medicine.
