Introduction

Now we can proudly say we have launched so many satellites to the space. We are waiting eagerly to buy a flat on the moon. We also are seeking for the ways to live in other planets. What is the basis of all those growth? What is the reason behind all those glories?

In the earlier days, mothers fed their babies by showing the sky and moon and telling the fantastic stories about the sky and the celestial bodies. That made them to think, imagine and develop on their creativity. That cheered them up to make the imagination to come alive. The beautiful story tellers have created valiant women who could travel to the space to orbit around the celestial bodies. Yes! It came true... Really we have to be proud to say that we have sent our powerful women to the space.

"As a Woman I have no country, as a Woman I want no country, as a woman my country is the whole world..." said Virginia Woolf.

But as a woman her country is not only the world, Of course it is the whole universe, the whole space! Yes it is...

The First Woman in Space

Now many countries are interested to send female astronaut to the space. Because they believe and understand that "The country will succeed by the potential and power of women". But few decades early, the people were not ready to send the women to the space. They always thought that women cannot withstand the psychological stresses of separation and isolation as men could do. The society was happy to keep their women in cozy comfort zone of that boundary, within the shade of the men as a father, brother and husband. There were lots of such boundaries needed to be broken for a woman to be an astronomer.

The woman, who dared not to remain just as story teller, but be the heroin of the story field. Yes, she desired to fly to the space. Of course she flew to space in 1963. She was the first female who went to the space. She did not restrict her role just to be a daughter
