

e-Shodhsindhu - Access Screenshots

The screenshot displays the e-Shodhsindhu website interface. At the top, a browser window shows the URL ess.inflibnet.ac.in. The website header includes a navigation menu with links: Home, About, Members, E-Resources, Search, INFED, and Shodh Shuddhi. A dropdown menu for 'Members' is open, listing options: New Member Registration, CFTIs, Universities, Technical Colleges, Self Subscribed Institutions (highlighted), and Search Members.

The main content area features a large banner with the text:

Welcome to e-ShodhSindhu: Consortium for Higher Education Electronic Resources

Provides access to e-resources to Universities, Colleges and Centrally Funded Technical Institutions in INDIA.

An Initiative by Ministry of Education, Govt of India

Being Executed by INFLIBNET Centre

Buttons for 'Read More' and 'Online e-Resources Requisition System' are present.

Below the banner is a statistics bar for the year 2020:

97	217	89	3200+	10000+	164300+	600000	22	4
CFTIs	Universities	Tech. Inst.	Colleges	e-Journals	e-Books	e-Books through NDL	Resources	Databases

 Summary for the Year 2020

At the bottom, there is a 'New@eSS' section with a link to <https://ess.inflibnet.ac.in/oes/selfsubscribed.php> and a graphic showing 'Off-Campus (Remote) access to online resources'.

Notice: Clarifications Regarding e-ShodhSindhu and Shodhganga for Colleges

Welcome to Online e-Resource Requisition System

Based on the recommendations for resources received through the online e-resources requisition system (<http://ess.inflibnet.ac.in/oes/>), the eSS has negotiated rates of subscription for selected resources. The resources are listed at **online portal** and the negotiated rates of subscription can be viewed by logging in to the online portal. You may register for the portal and select the resources that will be useful for your institution. **Registration on the e-Shodh Sindhu portal do not entitle you for access to any resources.**

Institutions have to subscribe to e-resources by placing orders directly to the respective publisher/authorized agents. After placing confirmed orders with respective publishers, institutions have to update subscription details under "Subscribed E-Resources" menu option on the portal for analysis and monitoring purposes.

About AIP Publishing

AIP Publishing is a wholly owned not-for-profit subsidiary of the American Institute of Physics (AIP). Our portfolio comprises highly regarded, peer-reviewed journals, including a growing portfolio of Open Access titles, that cover all areas of the physical sciences.

The research published in these titles paves the way for new fields of study, gives rise to new techniques, and provides inspiration to contemporary researchers.

Abstract. This paper introduces a framework that integrates a reasoner based on defeasible argumentation with a large information repository backed by one or several relational databases. In our scenario, we assume that the databases involved are updated by external independent applications, possibly introducing inconsistencies in a particular database, or leading to inconsistency among the subset of databases that refer to the same data. Argumentation reasoning will contribute with the possibility of obtaining consistent answers from the information repository with the properties described. We present the *Database Integration for Defeasible Logic Programming* (DBI-DeLP) framework, which enables commonsense reasoning based on *Defeasible Logic Programming* (DeLP) by extending the system capabilities to handle large amounts of data and providing consistent answers for queries posed to it.

1 Introduction

inconsistency found in the data coming from real domains while providing consistent answers and human-like explanations.

However, in RBAS the arguments are build using information contained in the program; this information can be perceived as *local* information, *i. e.*, more subjective and therefore affected by the agent's particular vision of the domain. To avoid giving answers heavily influenced by fixed facts in the program, it is important to include in the reasoning new sources of supporting data from which the arguments can be build. Nevertheless, using external sources of data can introduce another problem: any massive collection of real data is prone to contain contradictory data. For example, consider a legal environment where new legal precedents are established each time a case resolution is given. A particular case can have a resolution in a first instance that declares a person guilty of a crime, but then in a second instance the sentence is changed declaring the person not guilty. In a relational database (or simply database) these two events can be stored as different records of the same table, making the database inconsistent as it says that the same person is both guilty and not guilty of the same crime, *i. e.*, it maintains conflicting data.

Conflict can also arise when data, while not by itself contradictory, still can lead to conflicting conclusions. Consider a RBAS with the following rules from a movies domain:

- If a movie has a rating below five then it is a bad movie.
- If an action movie has the actor Stallone as its star then is not a bad movie.

Suppose that the system has access to a database with film reviews that states the rating of a film as four, and there is another database showing that in the same film Stallone has the leading role. There exists a conflict between these two data sources as they can support both the conclusion of the movie being bad and not bad. This type of situations are very common and have to be addressed.

We will introduce a framework that enables argumentative reasoning over data stored in relational databases referred to as *Database Integration for Defeasible Logic Programming* (DBI-DeLP). For this, DBI-DeLP uses DeLP to handle the argumentation process and feeds it with information retrieved from available
