About the Seminar

Medicinal plants have been acknowledged and are extremely valued all over the world as a prosperous source of bioactive compounds for the prevention and treatment of ailments. Healing with medicinal plants is as old as mankind itself. A large number of medicinal plants are known to possess one or other medicinal properties and are in use in the indigenous system of medicine. Herbal Nutraceuticals is one such concept used as a powerful instrument in maintaining and to act against nutritionally induced acute chronic diseases, thereby promoting optimal health, longevity and quality of life. This seminar will bring the dissemination of information about the knowledge of Traditional system of medicines, their usage and practices from generation to generation. This will also help to examine the current status of knowledge about the sustainable utilization and conservation of medicinal plants.
